

Installation Instructions

Read the following installation instructions for Anza table assembly.
SAVE THESE INSTRUCTIONS.

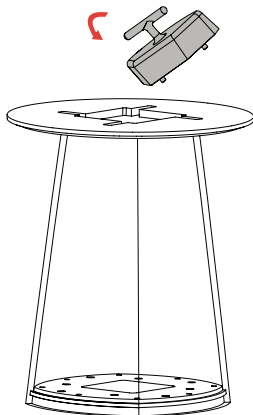

Begin by carefully removing all components from the box, placing table top on a clean, protected surface. Anza tables will come pre-assembled with glides installed in the bottom of the table.

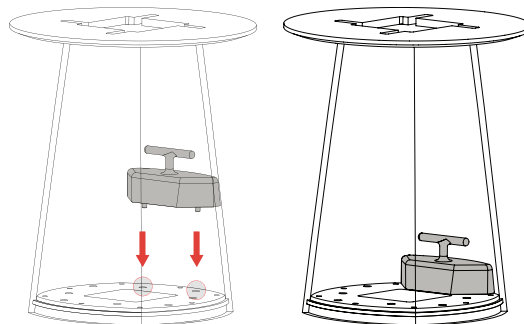

Anza tables will come with the following hardware required for installation:

- (4) 30 lb counterweights
- #8 x 1 1/4" Wood Screws

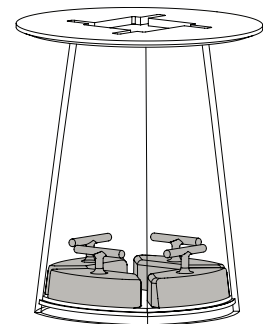

- 1** Set table base in desired location and make sure all levelers are touching the ground. Pre-level table base before installing weights. After the base is leveled, carefully install (4) 30 lb counterweights, see below.

Using two hands, install 30 lb counterweight.

Weight is designed with pins on the bottom side. Align pins with alignment holes to secure weight.

Repeat installation for remaining (3) weights.

- 2** Once weights have been installed, run any electrical before installing the table top.

- 3** Using the #8 x 1 1/4" wood screws secure table top to base. Adjust levelers if necessary. Table must be properly leveled to ensure stability and safety.
